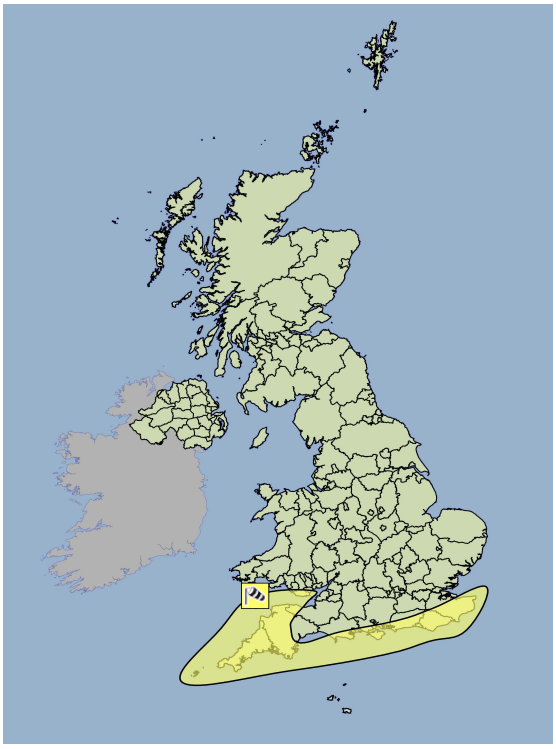
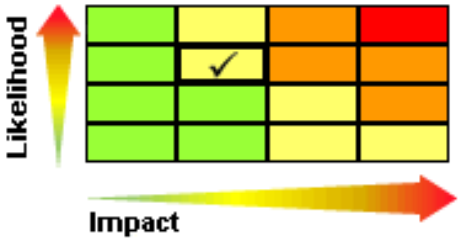
National Severe Weather Warning Service





Chief Forecasters Assessment
An area of low pressure will deepen slowly as it moves north towards the Bristol Channel by the middle of Monday, while tightening gradients on its southern flank bringing strengthening westerly winds across parts of southern Britain. Gusts will be particularly strong near to heavy showers, and may be enough to cause some damage to trees which are still in full leaf.

The Met Office have issued a **Yellow Warning** of **Wind**

Valid from **05:00 on Mon, 14th Sep 2015** until **20:00 on Mon, 14th Sep 2015**

Westerly gales will start to affect the Isles of Scilly and the far south of Cornwall early on Monday morning, before moving further north and east across other parts of southwest England and southern coastal counties during the rest of the day, perhaps also running up the Bristol Channel to clip the far south of Wales.

Gusts of 45-55 mph are likely in some places, perhaps touching 60 to 65 mph across exposed coasts and hills.

Given that this is one of the first gales of the autumn, the public should be aware of the risk of localised disruption, possibly affecting travel and late holiday activities.
